Education

University of Sydney

Master of Data Science

Feb 2025 - Nov 2026

• WAM: 83

• Relevant study: Machine Learning, Statistical Modelling, Data Management, Data Visualisation and Big Data Analytics

• Completed projects using Python, R, SQL and machine-learning methods

University of Mumbai

Bachelor of Science in Statistics

Jul 2021 - May 2024

• GPA: 8.6/10

• Relevant study: Probability, Regression Analysis, Statistical Computing and Applied Mathematics

Experience

Data Analytics Intern - Meridia Retail Labs (Bengaluru, India)

May 2024 - Aug 2024

- Cleaned and analysed more than 300,000 customer transaction records using Python and pandas.
- Wrote SQL queries to compare sales, customer retention and repeat-purchase rates across six regional markets.
- Built a customer churn model using logistic regression and random forest, achieving an AUC of 0.82 on the test dataset.
- Evaluated model performance using precision, recall, F1-score and cross-validation.
- Created a Tableau dashboard showing customer segments, churn rates and purchasing trends.
- Prepared weekly dashboard summaries for the marketing team.
- Supported the team in investigating a decline in repeat purchases.

Research & Projects

Customer Churn Prediction - Capstone Project

Mar 2026 - May 2026

- Analysed a dataset containing 45,000 customer records using Python and SQL.
- Compared logistic regression, random forest and XGBoost models.
- Used cross-validation and class-weight adjustment to address class imbalance.
- Selected the final model based on recall and AUC rather than overall accuracy.
- Used SHAP values to identify the variables most strongly associated with customer churn.
- Documented the analysis, model limitations and reproducibility steps in a GitHub repository.

Retail Demand Forecasting - University Project

Aug 2025 - Oct 2025

- Analysed two years of weekly product sales data using R.
- Compared moving-average, exponential-smoothing and ARIMA forecasting methods.
- Evaluated forecast accuracy using MAE and RMSE.
- Created visualisations comparing predicted and actual demand.
- Produced a short technical report describing the methodology and limitations.

Activities

General Member - University Data Science Society

Mar 2025 - Present

- Attended machine-learning workshops, industry panels and student networking events.
- Participated in discussions about data science applications and responsible AI.
- Supported several society activities during the academic year.

Participant - Data for Social Good Hackathon

Sep 2025

- Worked with a student team on a data project related to public transport accessibility.
- Assisted with data preparation and development of the final presentation.
- Contributed to the team's proposed solution.

Skills

- **Programming:** Python, R, SQL
- **Data Analysis:** pandas, NumPy, statistical analysis and data cleaning
- **Machine Learning:** scikit-learn, XGBoost, regression, classification and model evaluation
- **Visualisation:** Tableau, Power BI, matplotlib and ggplot2
- **Tools:** Git, GitHub and Jupyter Notebook
- **Core Skills:** Problem solving, teamwork, communication and attention to detail
